

3. (Amended) The electronic apparatus according to Claim 1,
the transparent member having a curved surface, and the luminescent panel
being formed along the curved surface of the transparent member in a curved manner.

4. (Amended) The electronic apparatus according to Claim 1,
the luminescent panel defining an area that is not provided with luminescent
elements, the transparent member defining an area corresponding to the area of the
luminescent panel that is not provided with luminescent elements, the area of the transparent
member being treated so as not to transmit ultraviolet light.

B2
C1
5. (Amended) An electronic apparatus comprising:
a luminescent panel; and
a case that houses the luminescent panel, the case being filled with an inactive
gas.

6. (Amended) An electronic apparatus, comprising:
a luminescent panel; and
a case that houses the luminescent panel, the case being evacuated.

B3
7. (Twice Amended) The electronic apparatus according to Claim 5,
the luminescent panel including a transparent flexible component.

8. (Amended) The electronic apparatus according to Claim 7, further
comprising:

B4
a controller that controls the drive of the luminescent panel, opposing a non-
displaying surface of the luminescent panel,
the luminescent panel being curved such that a surface that displays
information of the luminescent panel is convex, and electrode lead-out portions provided at
ends of the luminescent panel in the curving direction being connected to the controller.
